

MobileTEENgps Installation Instructions

Package Contents:

- **MobileTeengps** unit with internal cellular and GPS antenna.
- OBDII power supply connector
- Zip ties

Connecting to Power:

Locate your vehicle's OBDII Port under the dash. The "OBD2" is typically located under the dash on the driver's side, but you may need to consult your vehicle's manual. Connect the power cord to the device and plug the other end into the OBDII Port.

Testing your MobileTEENgps device:

Prior to securing the device under the driver's side dash with the zip ties, place the device on top of the dash. The device will proceed thru a series of light sequences as it calibrates and powers up. After 5-10 minutes, the 2 LED's on the back of the unit should be solid green and solid orange, once the unit is receiving good signals.

Now it's time to perform a test of the unit's tracking functionality on the vehicle. Be sure to fully secure the unit with zip ties under the dash of the vehicle so that it does not interfere with any of the controls of the vehicle. To start the tracking of the vehicle, it may need to be driven a short distance (500 yards or more). Once back from driving the vehicle with the unit installed, login into your account at www.mobileteengps.com. The system will show the path driven for the vehicle and the current location.

Customer Service:

Any issues or needs, please call our customer service line at 877-477-3748. Hours are M-F 9am-5pm EST. After hours or if you receive a voice mail response during business hours, leave a message and we will return your call ASAP.
